

Shadow to Steel

Obedience, Iron, and the Return of the King

Glenn Michael

The King does not return the same as
when he left. He returns forged in the
fire of obedience.

*To those walking through the valley and the forge,
may you walk the path that leads to steel.*

Introduction

If you make a vow to the Lord your God, do not be lax in paying it off, for the Lord your God will certainly require it of you and you would be guilty of sin. - Deuteronomy 23:21

Following years of decline, on July 5, 2022 I was diagnosed with Relapsing Polychondritis — a rare, chronic, and often fatal autoimmune disease that attacks and destroys the body’s cartilage, particularly in the eyes, ears, nose, respiratory system, and trachea.

In my case, the disease had ravaged nearly every system. It destroyed my right knee (requiring surgery), my left hip (requiring replacement), and my nasal cartilage (rebuilt from chest cartilage, which revealed almost none left in the ribs). Looking back now, that outcome was merciful compared to the total destruction and floating chest many others endure.

In the recliner, facing what looked like my certain end, a great fear fell over me: I was going to die. After a few minutes, I thought to myself, “This changes nothing. I was born, and like every person born into this world, I am going to die.” The only difference now was that I had an idea of the timing — imminent — and the means: destruction of my cartilage and airways.

Then I prayed to the Lord. First, I confessed my sins against Him. Second, I apologized for my arrogance in believing all I had accomplished was due to me alone, instead of recognizing those things as blessings from the Lord. Finally, I said, “If it is my time, then it is my time. If it is not my time, tell me what to do to fix myself, and I’ll do it.”

The next morning, in the twilight between sleep and waking, the Lord answered: “Bench. Squat. Deadlift.”

For those unfamiliar with powerlifting or gym culture, these are known as the Big Three — multi-joint compound lifts. A counter-intuitive recommendation for a patient with a serious connective tissue disease.

That answer was not a miracle. It was a path. A forge. A way through the valley of the shadow of death. This book is the story of that path — from near-death weakness to restoration, from betrayal to sovereignty, from Shadow to Steel.

Chapter 1

The Black Marble Room

Five years before the recliner, before the diagnosis, before the voice, I was already in the Valley of the Shadow of Death. I just didn't know the name for it yet.

Nothing was going right.

- I had been wrongfully terminated from my job, my restricted stock awards, spitefully canceled. I lost a significant amount of wealth.
- Shortly afterward, lightning struck our home. The top floor burned. The lower floor flooded from the firefighting efforts. Most of the house was destroyed.
- Having lost my job, the person that had driven the termination was using the full legal weight of the bank which I had worked to blacklist me, I began an independent consultancy which required me to be away from home five to six days a week,
- My family relationships began to fray under the strain.

Living alone in cheap hotel rooms sinking with neither an end nor aid in sight the weight of it all became unbearable. One night, I cried out to the Lord with raw desperation: "Lord, I cannot bear this any longer. If there is an end to it, please let me know. If not, at least tell me that too, so I can resign myself to this trap."

That night I had the most vivid dream of my life.

I stood in a vast, windowless chamber carved from a single block of polished black marble. The walls and floor were seamless, cold, reflective - like night itself made solid. There was no door, no window, no visible exit. Far above, impossibly high in the ceiling, a tiny opening let in a faint shaft of light. It might as well have been on the moon.

I tried to climb. I wedged my body into the smooth corners, straining upward, but the marble offered no grip. Even if I gained height, exhaustion would have pulled me back down to my death.

Defeated and breathing hard, a simple marble bench appeared behind me. I sat down and told myself, "Don't panic. You're a smart person. You can figure this out."

Then I felt a presence to my left — masculine, calm, and authoritative — yet I could never see Him directly. He remained just beyond the edge of my vision, always slightly out of sight. In a quiet, steady voice He said, "We have decided to show you what is going to happen to you."

He led me to the left-most corner of the room — the very corner I had already examined and found nothing. Now there was a doorway. Behind it stretched a long hallway lined with identical black marble doors on both sides. We walked until He stopped at one and said, “This is your door.”

I opened it and stepped into a smaller black marble room, identical to the first. In the center, on a raised pedestal, sat a golden tabernacle — exactly like the one that holds the Eucharist in church. I opened the doors and looked inside.

I cannot describe what I saw. I can only tell you the single overwhelming thought that flooded me: That’s not so bad.

I stepped back into the hallway. The presence was still there. We walked to the far end and exited. I was back in the original large chamber. The marble bench remained, but the doorway and hallway had vanished. Only the tiny unreachable light high above remained.

I sat down again, still trying to solve the puzzle, and then I woke up.

I never forgot that dream. It was the first quiet answer to a prayer I had not yet fully prayed. Seven years later, when I sat in the recliner facing what looked like certain death, the Lord had already shown me the truth: even in the most sealed, lightless chamber, a way out existed — if I was willing to wait, to listen, and to obey.

The dream was the seed planted in darkness. The prayer — “tell me what to do and I will do it” — became the vow.

And the iron would become the path.

I would come to realize, that I was walking through the valley of the shadow of death. But, before that realization came to me another was to precede – the Book of Job.

The Book of Job is one of the oldest and most profound books in the Bible. It is not primarily about why "bad things happen to good people." It is about **faith under extreme testing** - whether a man will serve God for who God is, or only for the blessings he receives. The story opens in Heaven with a dialog between God and Satan. God points out Job as "blameless and upright, a man who fears God and shuns evil." Satan immediately accuses Job of conditional faith: "Does Job fear God for nothing?" That is to say, Satan claims Job only serves God because God has built a protective hedge of blessing around Job.

God then permits Satan to test Job - but with strict limits. Satan cannot kill Job or take his life. Everything else is on the table. The story illustrates that Satan does not attack randomly. Rather, Satan uses a systematic, multi-layered strategy designed to break Job’s faith from every direction. And rest assured Satan will use the same strategy with each and every person. Satan’s attack vectors as outlined in chapters one through two are outlined below:

1. Economic - Livelihood Destruction (Job 1:14-17)

- Sabeans steal oxen and donkeys and kill servants.
- Fire from heaven burns the sheep and shepherds.
- Chaldeans steal camels and kill more servants.

Satan wipes out Job's entire wealth and business in one day. The goal: remove security and provision.

2. Family - Emotional Devastation (Job 1:18-19)

- A great wind collapses the house where all ten of Job's children are feasting and kills everyone of them.

Satan removes Job's entire legacy and support system in a single moment. The goal: crush the heart.

3. Physical - Bodily Affliction (Job 2:7-8)

- Satan strikes Job with painful sores from the soles of his feet to the top of his head.

Job is left scraping himself with broken pottery while sitting in ashes. The goal: constant, unrelenting torment that makes every moment miserable

4. Relations - Social Isolation (Job 2:9-10 and throughout)

- Job's wife tells him to "Curse God and die."
- Job's three friends (and later Elihu) arrive, but instead of comfort they accuse Job of hidden sin and judge him relentlessly for 30+ chapters.

Satan turns the people closest to Job into sources of pain and accusation. The goal: total loneliness.

5. Spiritual - Psychological Attack (the entire of the book)

- Job is plunged into deep despair, questioning why he was ever born, feeling abandoned by God, and wrestling with the apparent injustice of it all.

Satan attacks the mind and the spirit, trying to drive Job to curse God. The goal: break the relationship with God

I had no understanding at the time that I was living through the very same multi-layered attack Satan had used against Job. In my ignorance, I simply fought harder to keep my head above water. The more I struggled, the deeper I sank into a darkness I could not name or escape. I was already walking through the valley of the shadow of death.

What I did not yet realize was that the Valley was also the forge.

Chapter 2

The Valley – The Place of Shadow and Fear

2 My God, my God, why have you forsaken me?
Why have you paid no heed to my cry for help, to my cries of anguish?
3 O my God, I cry by day, but you do not answer, by night,
but I am afforded no relief.
20 But you, O lord, do not remain aloof from me;
O my Strength, come quickly to my aid. – Psalm 22

Psalm 22 was written by King David around 1000–970 BC during one of his darkest periods. Most scholars believe it was composed while he was on the run during the rebellion of his own son Absalom. At the time, David was hunted, betrayed by his closest advisor, publicly humiliated, and utterly alone — living in the valley of the shadow of death.

I knew exactly how he felt.

For years the misfortune had been grinding me down. I felt a complete emotional disconnect from the woman I loved. The marriage that once anchored me had gone cold and silent. I prayed the same desperate question David did: My God, why have you abandoned me? At first I convinced myself the Lord had left because I was unworthy—I hadn't been to church in years. Then I began to wonder if God existed at all. Neither thought brought comfort.

Standing alone on the train platform into town, the sky darkened by heavy clouds. It was cold and damp, and a stinging bitter wind whipped across my face. At that moment I had an epiphany: this is exactly how my inner world felt. Yet I continued to pray. I still believed in God. I still sought comfort from the Lord. The devastating truth was not that God did not exist, but that I could no longer feel His presence. And I had no idea that I would have to walk through the valley of the shadow of death before I would feel it again.

The Summer of 2021, I was walking through the valley- I didn't fully recognize it. June. Middle of the season, yet I wore a hoodie outdoors because I was freezing down to my core. My right knee had been painful and swollen for six months due to a torn meniscus. - how it happened was beyond me. After repeated cortisone injections, insurance finally approved surgery. During the follow-up the surgeon told me he had sent fluid from my

knee for cancer testing—it looked that abnormal. The result came back negative. Only later visit would he realize the fluid was classic for the autoimmune disease that was already destroying me.

Physical therapy after knee surgery brought new pain in my left hip. Within weeks I could barely walk. The hip surgeon showed me comparative X-rays: the cartilage in my left hip had been completely erased while the right hip remained unchanged. “What could do something like that?” I asked. He had no answer.

Then came the dry cough and shortness of breath – constant, unnatural. Interns and nurses noticed it. The hip replacement itself triggered a major flare. Nasal cartilage was destroyed, leaving me with a saddle-nose deformity. The shortness of breath and chest pain continued. I bought a Peloton, mostly to help build leg strength following the two surgeries and I believe the shortness of breath convinced the was due to poor conditioning - little did I know that the kind of shortness of breath I was experiencing was a classic autoimmune symptom. Every ride became a battle: coughing, gasping, fighting an invisible enemy that was killing me slowly, methodically, day by day.

January 2022, late one night I laying in bed facing the truth: a silent killer was winning. I turned to the Lord with a simple, stripped-down prayer: “Lord, something is killing me. All I want is to know - what it is. Please get me in front of someone who can tell me before I die.”

The next morning, in that quiet twilight between sleep and waking, a voice—not my own—spoke with calm authority:

“Don’t worry about work, don’t worry about insurance, just call everyone you can and take whatever appointment is available—today, tomorrow, a month, a year from now - It doesn’t matter.”

I started with the obvious: my ruined nose. I called ENT offices until, on the fifth try, a cheerful woman at Rush University answered. “You’re in luck—we just reopened this week.” She booked me with the department’s top specialist, Dr. Papagiannopoulos.

A week later, I was sitting in the exam room waiting for the doctor. Once he arrived and we traded pleasantries, I went over the litany of maladies that had befallen me, each in its proper order. I dropped the surgical mask they had given me to wear at admittance showing him the saddle nose deformity and said - "then this happened." He replied, "I am sorry that happened to you." This was the first time anyone had expressed sympathy for the deformity that had befallen me. after which, he immediately referred me to rheumatology.

That same day, I met Dr. Block. He entered the exam room, looked me over and asked who referred me. I replied, Dr. Papagiannopoulos, he nodded in approval. I had managed to find the right doctor, one that could see the seriousness of my situation, and who would in turn refer me rightly to another that would help me - my prayer had been answered.

Dr. Block agreed, we needed to repair my nose. A biopsy was needed to aid in the identification of the disease. Over the course of the next six months, while waiting for my nasal reconstruction, I returned to Rush on a monthly basis for routine examinations and blood draws. During this time I met Doctor Revenaugh the surgeon that would repair my nose. Initially, he indicated that he would repair the saddle deformity but not the

hole in the septum. I explained to him, I realized the septum repair had at best and 80 percent success rate but even in the case of a failure it is an improvement. I asked him to try, if it does not fully succeed that is fine at least we tried. He agreed to try.

The surgery went forward, I splints in my nose to protect the repair work to my septum, they would remain for the summer. The chest cartilage recovered to repair the saddle deformity was, as Dr. Revenaugh put it - 'barely viable'. The disease had destroyed my chest cartilage. Fortunately, it had remodeled itself into a fibrous tissue, something they had never seen before; I had been spared the fate of a 'loose chest', which is common in these instances.

On my next visit in July they delivered the diagnosis Relapsing Polychondritis; until the surgery the disease had been running at a constant low level - insidious - making it unidentifiable. It had impacted the cartilage in my right knee, destroyed the cartilage in my nose, chest, left hip, and was now slowly destroying the cartilage in my respiratory tract and trachea.

My childhood asthma returned and breathing became increasingly difficult. Doctor Block referred me for a pulmonary test. At the follow up, I met doctor Vashi, she began treating me for both my resurgent asthma as well as the damage done to my respiratory tract.

The diagnosis landed like a sentence: Relapsing Polychondritis. I now knew the name of the silent killer that had been destroying me piece by piece. My earlier prayer had been answered. In the recliner that July evening, the weight of it settled fully. I was going to die.

After a few minutes the fear gave way to clarity. I had already walked through the valley. I had already seen the black marble room. I had already heard the first quiet answer. In that moment I prayed as David once did in Psalm 22:

I confessed my sins against the Lord. I apologized for the arrogance of believing everything I had accomplished was by my own strength instead of recognizing those things as blessings from Him. Then I made no bargain — only a vow.

"If it is my time, then it is my time. If it is not my time, tell me what to do to fix myself, and I will do it."

The next morning, in the twilight between sleep and waking, the voice returned — calm and unmistakable:

"Bench, Squat Deadlift."

For those unfamiliar with powerlifting, these are the Big Three — the foundational compound lifts. For a man whose cartilage was being systematically destroyed by disease, the prescription sounded absurd. Yet in that moment, I understood: this was not a miracle. This was a path. This was the forge — the forge I knew so well from childhood.

The Valley had shown me the darkness. The Lord had shown me the way out. Now the iron would become the fire that would refine the shadow of death into steel.

Even though I walk through the valley of the shadow of death, I will fear no evil, for you are with me; your rod and your staff, they comfort me. — Psalm 23:4-5

The Lord heard my cries and answered — not with a miracle, but with a prescription. I was to step from the valley of the shadow of death into the forge that refines, and I knew the Lord was with me.

Chapter 3

The Forge – The Fire That Refines

**2 But who will be able to endure the day of his coming,
and who can stand when he appears?
For he is like a refiner's fire or fuller's soap.
3 He will sit refining and purifying:
he will purify the descendants of Levi
and refine them like gold and silver.
so that they may in righteousness
offer due sacrifice to the Lord. – Malachi 3:2-3**

I have known the fire of the forge longer than I realized. As a child, I suffered from severe asthma. Each day was the same: some days were manageable, others a struggle. But the nights were different. I would wake in the late hours gasping for air, chest tight, lungs constricted. Some nights I would pass out from lack of oxygen. Other nights I would collapse from exhaustion simply trying to breathe.

I never complained. I just kept going.

Years later, my Uncle Mike — who suffers from COPD — reflected on those days after Sunday brunch. He looked at me and said, “My sister once told me, you never complained about your asthma. You just kept going.”

He was right. Even then, without knowing its name or purpose, I was already walking through the first forge. The same enemy that would later attack my cartilage, my marriage, and my peace was already testing me in the quiet hours of childhood. He could not break me then, and he would not break me later.

As a child, I would often pray to the Lord, why this affliction, why me? Always, to no answer, not because the Lord did not hear my prayer but because the prayer itself was not correct – rather than asking the Lord for assistance I questioned Him. I resolved myself to overcome my affliction, I began running; working myself up to a 6-1/2 minute mile. I participated in mini-marathons, training marathon distance, weight training. Overtime, through fortitude and determination I got stronger. I convinced myself that the Lord was an observer and not a participant in my life. I drifted from the Church and came to despise any weakness in myself - weakness was something to remedied at all costs.

I realized that the purpose of the first forge was to develop the determination and will that would enable me to withstand the fire of the second forge. I slowly returned to Church, prayed my Rosary daily and I began to understand:

The adversity we face has a purpose. The Bible does not frame adversity and suffering as an accident. It treats it as a deliberate refining process. The prophet Malachi describes the Lord as a refiner's fire:

"But who can endure the day of his coming? Who can stand when he appears? For he is like a refiner's fire. . . He will sit as a refiner and purifier of silver." (Malachi 3:2-3).

The fire does not destroy the silver – it burns away the dross so that what remains is pure. The furnace does not consume the gold – it separates the impurities so the metal can be shaped and used.

The same principle appears again and again throughout Scripture. Job was stripped of everything so his faith could be proven genuine. David cried out in the Valley of the Shadow and emerged declaring God's name in the great assembly. Peter wrote that these trials come " so that the proven genuineness of your faith — of greater worth than gold, which perishes even though refined by fire — may result in praise, glory and honor when Jesus Christ is revealed " (1 Peter 1:7). The Forge is not random suffering. It is the deliberate, holy fire of the Refiner. The Lord does not watch from a distance — He is in the fire with us:

This is the ancient pattern repeated throughout Scripture. Isaiah declares, " See, I have refined you, though not as silver; I have tested you in the furnace of affliction " (Isaiah 48:10). Zechariah promises the Lord will put His people through the fire " and refine them as silver is refined, and test them as gold is tested " (Zechariah 13:9). Peter tells us these trials come so that " the proven genuineness of your faith—of greater worth than gold, which perishes even though refined by fire—may result in praise, glory and honor when Jesus Christ is revealed " (1 Peter 1:6-7). The Forge is not punishment.

It is purification. The enemy attacks which is most important — first a man's spirit and then his physical strength — thinking he will break the man. But every blow he lands only turns up the heat of the Forge that the Lord Himself placed us in. The small god of this world believes he is destroying us. The King knows he is only intensifying the refining process. More dross is burned away and the steel that emerges is unbreakable.

Nothing the enemy takes is beyond the Lord's reach. Job, stripped of everything, declared, "But he knows the way that I take; when he has tested me, I will come forth as gold" (Job 23:10). David walked through the Valley of the Shadow and emerged declaring God's name in the great assembly. The same fire that tested them is the fire that tested me.

The prescription had been given and the path was clear "Bench, Squat, Deadlift" it required surrender to the will of the Lord – obedience in the face of adversity.

The Forge and faith are not separate. They are locked in a living covenant. The fire tests the faith, and the faith steps willingly into the fire. Each strengthens the other. The Lord does not call us to passive endurance. He calls us to active obedience inside the furnace. This is why the voice in the recliner did not say "pray harder" or "wait for healing." It said something far more demanding. The command: "Bench, Squat, Deadlift" was the birth of my Iron Church — the physical expression of faith when everything in the body

is screaming to quit. The Forge is the fire and the Iron Church is the expression of faith and together they shape the man.

Faith (Jesus's Church) without the Iron Church becomes soft and theoretical, Iron Church without Jesus's Church becomes mere exercise and pride. But, when the two are yoked together, iron sharpens iron (Proverbs 27:17). Each strengthens the other, a man become whole and something unbreakable is formed; and men rise to that for which they were made.

Once one begins to understand this, every rep, every set, every mile on the treadmill becomes an act of worship. Each time the body wants to stop and the will chooses to continue, faith is proven genuine and the dross is burned away. The enemy thought he could destroy me by attacking the body. Instead, I was driven deeper into the Forge and forced me to build the very thing that would make me stronger — deeper faith God Church yoked to the Iron Church.

This is the mystery of the refining fire: the hotter the flame, the stronger the steel. The greater the adversity, the deeper the faith. The two do not oppose each other. They complete each other.

The Valley had shown me the darkness. What I did not yet fully understand was that the Valley itself had become the Forge. The same place of despair and near-death had been transformed into the crucible where steel is made. The prescription was not an escape from the fire — it was the fire. The iron would do what medicine alone could not: rebuild the body, sharpen the mind, and temper the spirit:

The Lord did not remove me from the Valley, He changed the Valley into the Forge, And in that Forge, the Iron Church was born.

Chapter 4

The Nature of God, Three Types of Men, Man's Biblical Role

**1 In the beginning was the Word,
and the Word was with God, and the Word was God,
2 He was with God in the very beginning,
3 Through Him all things came into existence,
and without Him there was nothing.**

The Valley became the Forge. The Forge called forth the Iron Church. But the fire does not stop at the weight room.

Today every man faces a different kind of fire — one that is quieter, more pervasive, and more dangerous to the soul of masculinity. It is the systematic feminization of culture and the relentless social engineering that seeks to weaken men, soften their nature, confuse their identity, and convince them that their strength itself is the problem — this is the great refining fire of our time.

4.1 The Nature of God

God did not create weak, uncertain, compliant men. He created men with strength, purpose, courage, and responsibility. The current age despises this design. It calls strength toxic, leadership oppression, and stoicism emotional damage. It spins the straw of fairy tales into ideology that tells women the very nature of men is the problem. The cultural fire must be faced, men must reject the narrative and society's attempt to feminize and weaken them. Men cannot succeed in this endeavor alone — they must turn to their creator, God the Father Almighty, and the Church of Jesus, the Catholic Church.

At the dawn of the 21st Century men seek purpose. They ask for purpose in their work and in their lives. To these men, to quote Winston Churchill, their purpose has become "a riddle, wrapped in a mystery, inside an enigma. " Why? Why so difficult for men to understand their purpose?

The answer to the above question is simple — Modernity. One hallmark characteristic, and some would argue, the defining characteristic of modernity is the relentless push to secularization. That is, the removal of God, Christianity, and the sacred from public

institutions, law, education, and culture. The era of modernity began sometime around the 15th through 18th century and continues to the present day.

Indeed, Friedrich Nietzsche recognized the problem of modernity when he first wrote the famous phrase "God is dead" in his book "The Gay (Joyful) Science." Nietzsche argues that "Enlightenment Science", dismantled the foundation of Christian morality. He realized, with God "dead," the entire foundation of Western morality, meaning, and values collapses leading to nihilism – a world without objective meaning; unless humanity could create new values to replace the Christian values. – humanity failed.

God is the uncaused-cause of the Universe. The Creator who spoke the universe into existence with precision and purpose. He is the Refiner who sits over the fire. He disciplines those He loves. He does not guarantee an easy life. He guarantees a meaningful one — a life where a man can choose eternal life – through worship, prayer, and discipline. Still modernity demands proof of God's existence – **the arrogance of Enlightenment**.

4.1.1 The Proof of God

The Fine Tuning Argument, posits the probability that the rules which govern physics and the universe arose by pure randomness is astonishingly small – so small in fact as to be zero. The physical constants of our universe are tuned with extraordinary precision to support the existence of life, stars, chemistry, and stable matter. Thus, all of creation reflects intelligent design. Fine tuning adherents point to reality as proof:

- The cosmological constant (dark energy density), fine tuned to roughly 1 part in 10^{120} .
- The precise strength of the nuclear force.
- The ratio of the electromagnetic force to gravity.
- The exact mass of the electron and other fundamental principles.

4.1.2 Hypothesis Seeking to Disprove God

1. **The Multiverse Hypothesis** posits a universe creating process which spews forth countless other universes. Thus, given a process that continually creates one random universe after another it is likely that one will come forth that will support intelligent life. The idea that our universe is merely one of countless others created with random constraints fails on several fronts:

- By what mechanism do these universes come forth? There is no known mechanism capable of generating truly random universes with varying laws. And, if such a mechanism does exist what is its cause?
- The problem of coexistence: how do infinite universes exist without collision or interference? A question whose answer would reduce to a finely tuned process.
- Lack of elegance: Infinite redundancy does not reflect supreme intelligence – it reflects insecurity. A truly sovereign Creator would have no need for backup plans.

2. **Deeper Underlying Law** suggests the constants are inevitable due to some yet-undiscovered mathematical necessity. However, this merely pushes the question back – where did the deeper underlying law originate, and why is it life-permitting.
3. **Simulation Hypothesis** proposes that all of reality is an artificial simulation run by higher beings. Further it argues, that these "higher beings" run numerous simulations and our simulation is but one of many. Sound familiar? It is *prima facie* absurd and the fact that any person gives it serious consideration speaks to the weakness of humanity. It is easily debunked. First, if higher beings are running simulations how did they come to existence? Second, if we lived in a simulation, conscious beings would be equivalent to sophisticated AIs. This contradicts the persistent subjective experience of human consciousness – the divine spark.

Each of the above hypothesis seeking to disprove God reflect the nihilism Nietzsche warned about with his famous phrase "God is dead." Indeed, the simulation hypothesis reflects peak nihilism reducing human consciousness to a computer program.

4.1.3 Proof of God – The Elegant Design

Proof of God – The Elegant Design We can frame the question directly and simply. There are two main explanations for why the universe exists the way it does:

Explanation 0: The physical constants are the result of pure chance. No intelligence or purpose is behind them. Explanation 1: The physical constants were deliberately set by an intelligent cause so that life, chemistry, and complexity could exist.

Before we look at any evidence, a person might have some initial feeling about which explanation is more likely. Let's say someone starts fairly skeptical and thinks Explanation 1 (design) is only 1 in 5 as likely as Explanation 0 (chance). In odds form, that's 1 to 5. Now we look at the evidence: the extreme fine-tuning of the universe.

The constants that govern gravity, the strong nuclear force, the cosmological constant, and several others sit in an incredibly narrow range. If any one of them were changed by even a tiny amount, stars could not form, chemistry would not work, and life would be impossible. The chance of all these constants landing in the life-permitting range by accident is extraordinarily small — Roger Penrose's estimate of 1 part in 10^{120} for the cosmological constant is the probability (likelihood) that this constant would fall within the extremely narrow life-permitting range by pure chance. – 1 followed by 120 zeros – in plain terms: the evidence (fine-tuning) is vastly more likely if the constants were set on purpose than if they were random.

Using basic odds:

Start with prior odds of 1 to 5 in favor of design. The evidence multiplies those odds by a huge number (the Bayes factor). Even if we use a very conservative estimate and say the evidence is 1,000,000,000,000 times – 10^{12} – more likely under design, the math becomes:

$$\frac{1 \times 1,000,000,000,000}{5} = 200,000,000,000 \text{ to } 1$$

After seeing the evidence, design is now 200 billion to 1 more likely than pure chance. Even if someone started with extremely skeptical prior odds (say 1 to 100), the fine-tuning

evidence would still push the final odds overwhelmingly in favor of an intelligent cause. This is how rational belief updating works. The data doesn't just fail to support chance — it makes chance astronomically unlikely. The universe was calibrated.

Of course, one may look at this as overly simplified. However, take into consideration both the multiverse and the simulation hypothesis. Both claim to rely on statistics. Namely — 'The Law of Large Numbers' — given sufficient random trials the conditions for life are met. I have claimed earlier this is the peak nihilism of the Age of Enlightenment and it is worth repeating — the best the age of enlightenment can come up with is that each person is without value — the outcome of a sufficient number of trials.

4.2 The Three Kinds of Men

The Lord does not leave man's purpose ambiguous. Men are called to lead with courage, love sacrificially, protect fiercely, and build what is good.. They are not called to be soft, passive, or constantly seeking approval from a culture that despises him. The feminization of everything is not progress. It is a rebellion against God's design. The man who understands this does not bow to the propaganda of culture. He enters the Forge willingly.

1. **The First Kind of Man – The Man who has not failed.** He may appear strong and successful on the surface. However, he has avoided major failure, hardship, or public collapse. Often he is supported by a scaffolding that is unseen by others. But, because he has never been tested or experienced struggle and failure he often lacks depth, resilience — he avoids the forge. And, when real fire comes, he is frequently the first to break. He is the man that gives way to culture, he does not stand in the breach.
2. **The Second Kind of Man – The Man who falls and stays down.** Adversity hits him — disease, betrayal, failure, loss — and he remains on the ground. This man becomes bitter, defeated, or numb. He accepts victimhood or mediocrity as his permanent state. The forge consumes him instead of refining him.
3. **The Third Kind of Man – The man who falls and rises.** This is the rarest and strogest kind of man. He is knocked down by life —sometimes repeatedly — but he gets back up. He enters the Forge willingly. He submits to the fire. He allows God to burn away the weakness, the pride, the illusion. He is the man that wanders the Valley of the Shadow — he is the man that is forged in the refiner's fire from Shadow to Steel.

The third kind of man is anchored spiritually, is sovereign, and embraces his strength (physical nature). He does this not because the fire is easy but because the fire is real. The world desperately needs more of the third kind of man.

4.3 The Biblical Man

The Biblical Man is the man who has been tested and has risen.

Jesus is the perfect model. He was tempted in every way as we are, yet without sin (Hebrews 4:15). He was a man of sorrows, acquainted with grief (Isaiah 53:3). He sweat blood in Gethsemane, was betrayed by a friend, beaten, mocked, and nailed to a cross. He was knocked all the way down into death. And on the third day, He rose in power.

His masculinity was not soft. It was steel forged in obedience. He led, He protected, He sacrificed, He conquered, and He now reigns as King of Kings and Lord of Lords (Revelation 19:16).

The Biblical Man follows this pattern. He does not stay down when life knocks him to the ground. He enters the fire. He submits to the refining. He allows God to burn away what is weak and false. He rises — scarred, but stronger. Humble, but dangerous. He does not negotiate with a culture that despises his design. He does not apologize for his strength. He kneels before the King of Kings as a sovereign king, then rises to lead. He does not chase validation. He earns respect through obedience and steel. The Biblical Man has been through the Forge. He knows what it costs. And he chooses to rise anyway — because Jesus did.

And yet, behind the steel of the Biblical Man stands the undeniable reality of the God who calls him forth. As I have reflected in the pages of *Credo*, matter does not motivate itself. Inert substance cannot stir, cannot order itself into life, cannot ignite the fire of purpose or the breath of spirit. The universe, with all its intricate laws and ordered beauty, bears witness: there must be a First Mover, an Uncreated Creator who stands outside of matter, time, and space breathing life into what would otherwise remain cold and still. This is no abstract philosophy. This is the God who spoke light into darkness, who formed man from dust and breathed into him the breath of life. This is the God whose Son — the ultimate Third Kind of Man — entered the forge of suffering and emerged victorious. In Him we see both the proof and the pattern: God is not distant, but intimately involved in the refining of every man who will kneel and rise again.

Chapter 5

The King that Kneels

I sat in the recliner in the dim light of the living room, the weight of years pressing down like cold iron on my chest. It was July 2022. The diagnosis of relapsing polychondritis had just landed—my own body turning against its cartilage, lungs burning, ribs cracked from the prednisone that was supposed to save me. My wife had made it clear she was not my nurse. The house felt like a tomb. In that moment, a simple, terrifying clarity broke through the fog: I was born, so I will die. What do I do with the time between? “Tell me what to do, Lord,” I whispered.

The answer came—not in thunder, but in three quiet words that would reshape everything: bench, squat, deadlift. It was not the response I expected from the God of the universe. Yet it was the beginning of everything. That night I didn’t rise as a conquering hero. I rose as a man who had finally knelt.

True kingship has always begun on the knees.

The world trains us to picture kings on throne – crowns heavy, swords raised, commands made from elevated platforms. We imagine strength as dominance, leadership as control, masculinity as never bending. But Scripture paints a radically different portrait. The greatest King who ever walked the earth knelt in a garden, sweat like blood, submitting to a cup He did not want to drink. He knelt again to wash the feet of men who would soon abandon Him. And because He knelt, He rose with authority that hell itself could not shake.

This is the paradox of the Third Kind of Man: he falls hard, he is refined in the fire, and when he rises, he does so with knees still marked by the floor. He is no longer the happy fool who believed love meant lowering every boundary and strength meant pretending nothing hurt. He has seen the Valley. He has felt the Forge. Now he understands that real sovereignty flows from surrender.

Look at King David – warrior, poet, adulterer, murderer, man after God’s own heart. His greatest moments were never when he stood tallest, but when he lay prostrate. “Have mercy on me, O God,” he cried in Psalm 51, face to the ground. Or consider the centurion in Matthew 8, a man of authority who told Jesus, “I am not worthy to have you come under my roof.” His servant was healed because a powerful man chose to kneel in faith.

In the black marble room of my 2017 dream, I sat trapped on a bench, no apparent way out. He came to me and led me showed me the way. I stepped through and He led to see how it would all end; “Not so bad.” For years I carried that dream like a riddle. Only

later did I see it clearly: Submission to the King of Kings was the key that freed me from the marble prison of my own making.

This is where many men break. Some want the crown without the kneeling, the steel without the refiner's fire . We want sovereignty while still clutching control, especially in marriage, work, and health. I tried that path for decades. I played the happy fool in a marriage, tolerating accusation and boundary violations while telling myself it was love. I nearly died physically and spiritually before I learned the lesson: a man who will not kneel before God will eventually kneel before everything else – fear, resentment, manipulation, or despair. But the man who kneels? He rises dangerous to the darkness and useful to the Kingdom.

In the chapters ahead we will unpack the Three Kingdoms a man is called to rule. Yet none of it stands without this first posture. Spiritual Kingdom, Kingdom of Sovereignty, Physical Kingdom – all of them rest on the daily decision to bend the knee. The fire of the Forge does not consume the man who has already laid his pride on the altar. This chapter is not theory. It is the hinge. From the Valley of the Shadow through the Biblical Man, we arrive here: on our knees. Only from this place can we stand upright in the authority that God entrusts to those He has tested and refined.

The King that kneels is the King that rules.

Conclusion

Revelation 21:5 – “Behold, I make all things new.”

The locusts came. I cried out. God answered. The repayment is unfolding — one rep, one breath, one day at a time.
